

30% Project Evaluation & Progress Report

Text Readability Analysis & AI-Powered Simplification Platform

[Admin Dashboard](#) | [Text Extraction](#) | [Text Scoring](#)

Evaluation Scope (30%)

01

Admin Dashboard Implementation

Development of a comprehensive admin panel using React and TypeScript for platform oversight, user management, and system analytics monitoring.

02

Text Extraction Module

Implementation of multi-format document processing with PDF, DOCX, TXT parsing capabilities and OCR integration for image-based text extraction.

03

Text Scoring & Readability Analysis

Core NLP pipeline utilizing spaCy for comprehensive readability analysis with multiple metrics including Flesch Reading Ease, Flesch-Kincaid Grade Level, SMOG Index, Coleman-Liau Index, and ARI with advanced visualization and grade-level classification.

Admin Dashboard Implementation

User Management

The admin panel provides a secured dashboard to oversee the platform's user base with comprehensive management capabilities.

View All Users

Access a complete registry of all registered users with detailed profile information and activity statistics.

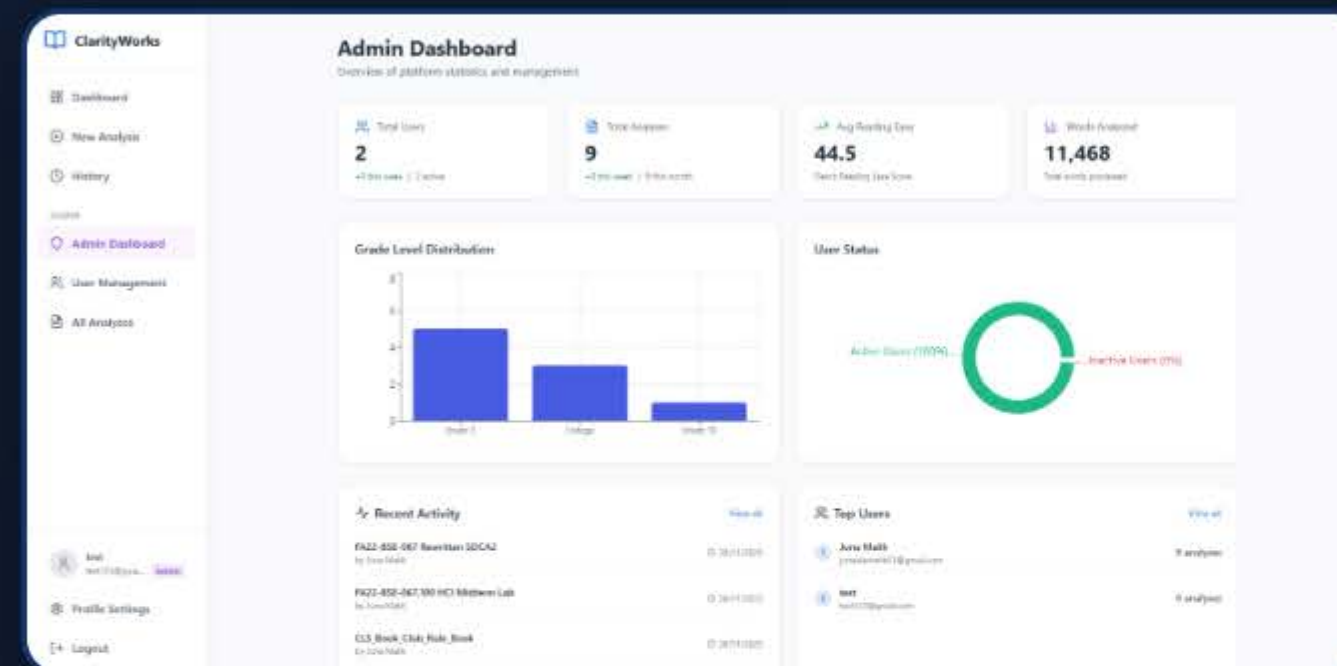

System Analytics

Monitor platform statistics including total analyses, average readability scores, user engagement, and grade level distribution.

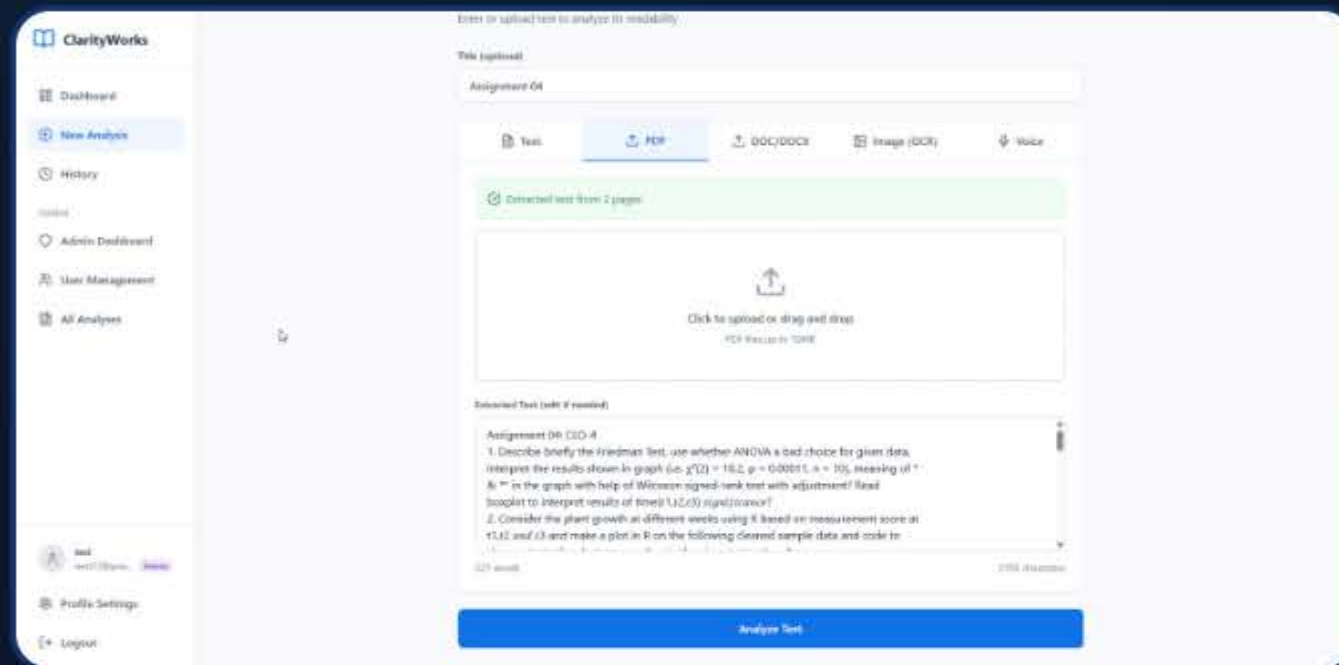

Activity Tracking

Real-time monitoring of user activities, recent analyses, and top users with comprehensive activity logs.

Text Extraction Module

Multi-Format Processing

Advanced document processing pipeline supporting multiple input methods for flexible text analysis.

Direct Text Input

Type or paste text directly into the analysis interface with real-time character and word counting.

Document Upload

Support for PDF, DOC/DOCX, and TXT file uploads up to 10MB with automatic text extraction and preprocessing.

OCR Integration

Tesseract-powered OCR for extracting text from images with high accuracy and multi-language support.

Text Scoring & Readability Analysis

Comprehensive NLP Pipeline

Advanced text analysis using spaCy NLP models with multiple readability metrics and intelligent grade-level classification.

Multiple Readability Metrics

Flesch Reading Ease, Flesch-Kincaid Grade, SMOG Index, Coleman-Liau, and ARI scores with radar chart visualization.

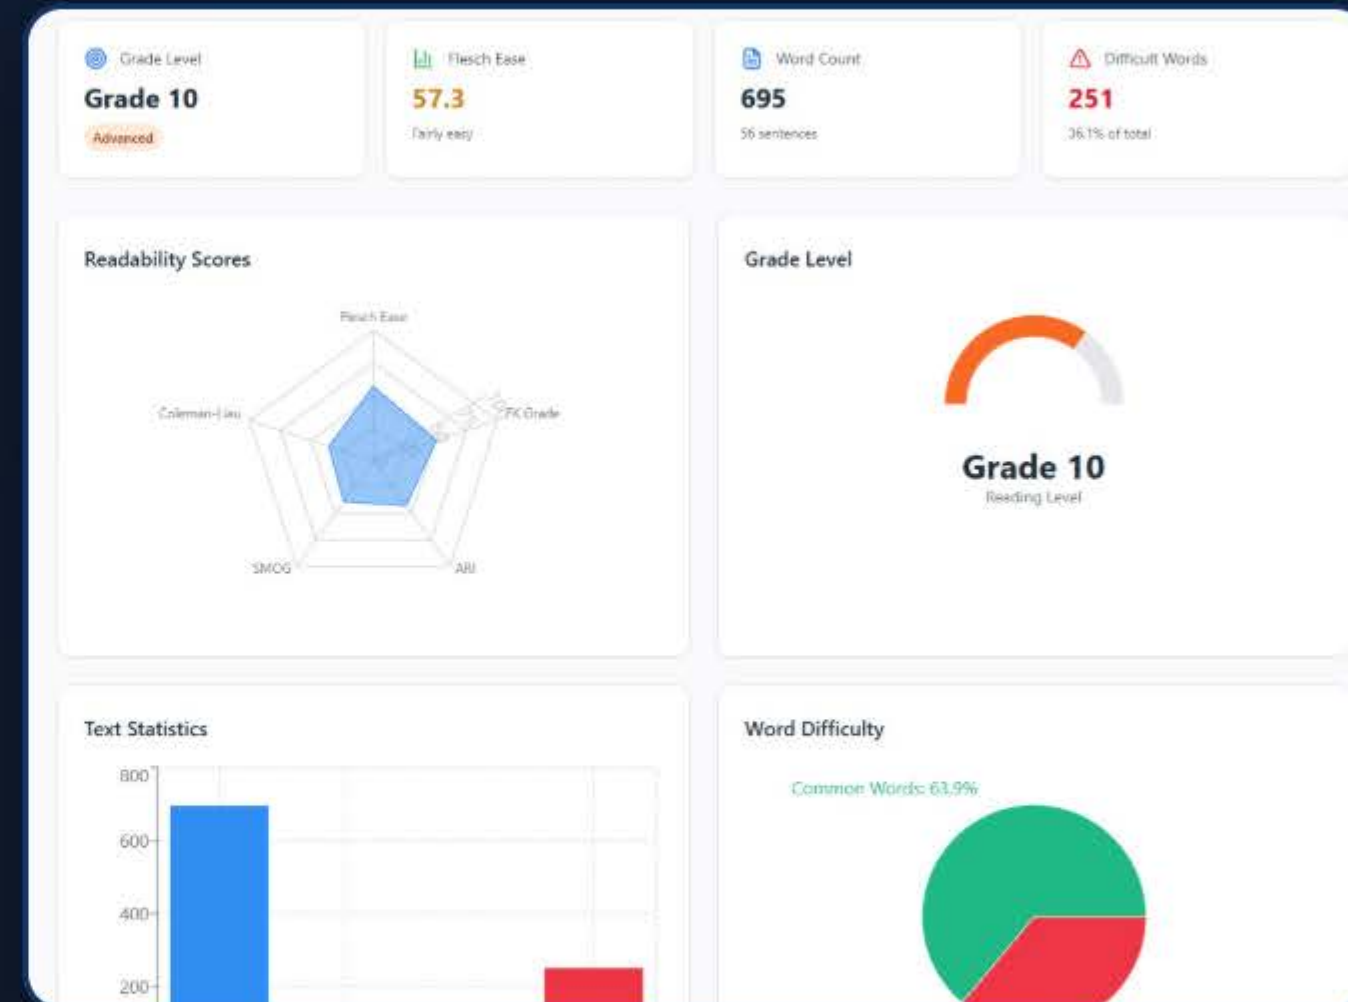

Grade Level Classification

Automatic classification from Grade 3 to College level with visual gauge representation and difficulty indicators.

Detailed Text Statistics

Word count, sentence analysis, difficult word identification (36.1% of total), and word difficulty distribution with interactive charts.

Analysis Pipeline Flow

Q&A

Thank you for your attention.
